CONSIDER SWITCHING YOUR SALINE BREAST IMPLANTS FOR SILICONE!

Now FDA approved for breast augmentation!

The MemoryGel™ implants you've been reading and hearing about have been successfully used and trusted for 20 years by millions of women all over the world. Why? **Because silicone implants feel more like natural breast tissue - without compromising reliability or safety.** After almost two decades of research and testing with surgeons and patients, MemoryGel™ silicone breast implants are now available to women in the U.S.

It has become common for patients that currently have saline breast implants to consider switching them for silicone implants. The reasons are many, but include: a more natural look and feel, a desire to move up or down in size, and a concern in the past about the safety of silicone, (now considered to be safe).

The procedure is considered by Dr. Rose to be fairly straight forward. It does require anesthesia, but can usually be done in less than an hour. If no additional surgery has to be done in the area around the implants, we would consider a **significant discount** off of our normal fee! Please call our office to schedule your **FREE** cosmetic surgery consultation. During that visit, you can get additional information regarding silicone breast implants as well as receive a quote for your surgery. It may surprise you how affordable it is!

Please call our office at 801-375-ROSE (7673) to schedule your **FREE** cosmetic surgery consultation.
